

ABLOY® EL560, EL561

High security DIN standard handle controlled lock for wooden and metal doors

Product description

High security locks EL560/561 are used especially in situations where the advantages of handlecontrolled unlocking have to be combined with the mechanical security requirements. The integrated monitoring contacts from the lock can be connected to the different systems.

When door closes, dead bolt is thrown out automatically, double action latch is blocked and the lock case is secured in two points.

The exit side settings EL560 and selecting between fail-locked and fail-unlocked can be performed on the lock as required.

EL560 with split spindle function Outside handle is engaged electrically, e.g. by electric access control. By pressing engaged handle, dead bolt is retracted and double action latch released.

Inside handle opens lock mechanically (exit function), no need for electric control.

EL561 with solid spindle function

Both handles are engaged electrically e.g. by electric access control. By pressing engaged handles, dead bolt is retracted and double action latch released.

Overview of Advantages

- Mechanical automatic locking system
- Non handed, left / right
- Exit side can be changed over *
 Can be changed between fail-unlocked & fail-locked
- · Burglary-resistant due to dead bolt with 20 mm throw
- Exit function by inside handleSuitable for fire doors
- Controllable outside handle *
- Mechanical override with cylinder
 Monitoring functions
- Door status
 Handle down
 Bolt deadlocked

 - Bolt in
 - Key cylinder used
 Sabotage loop
